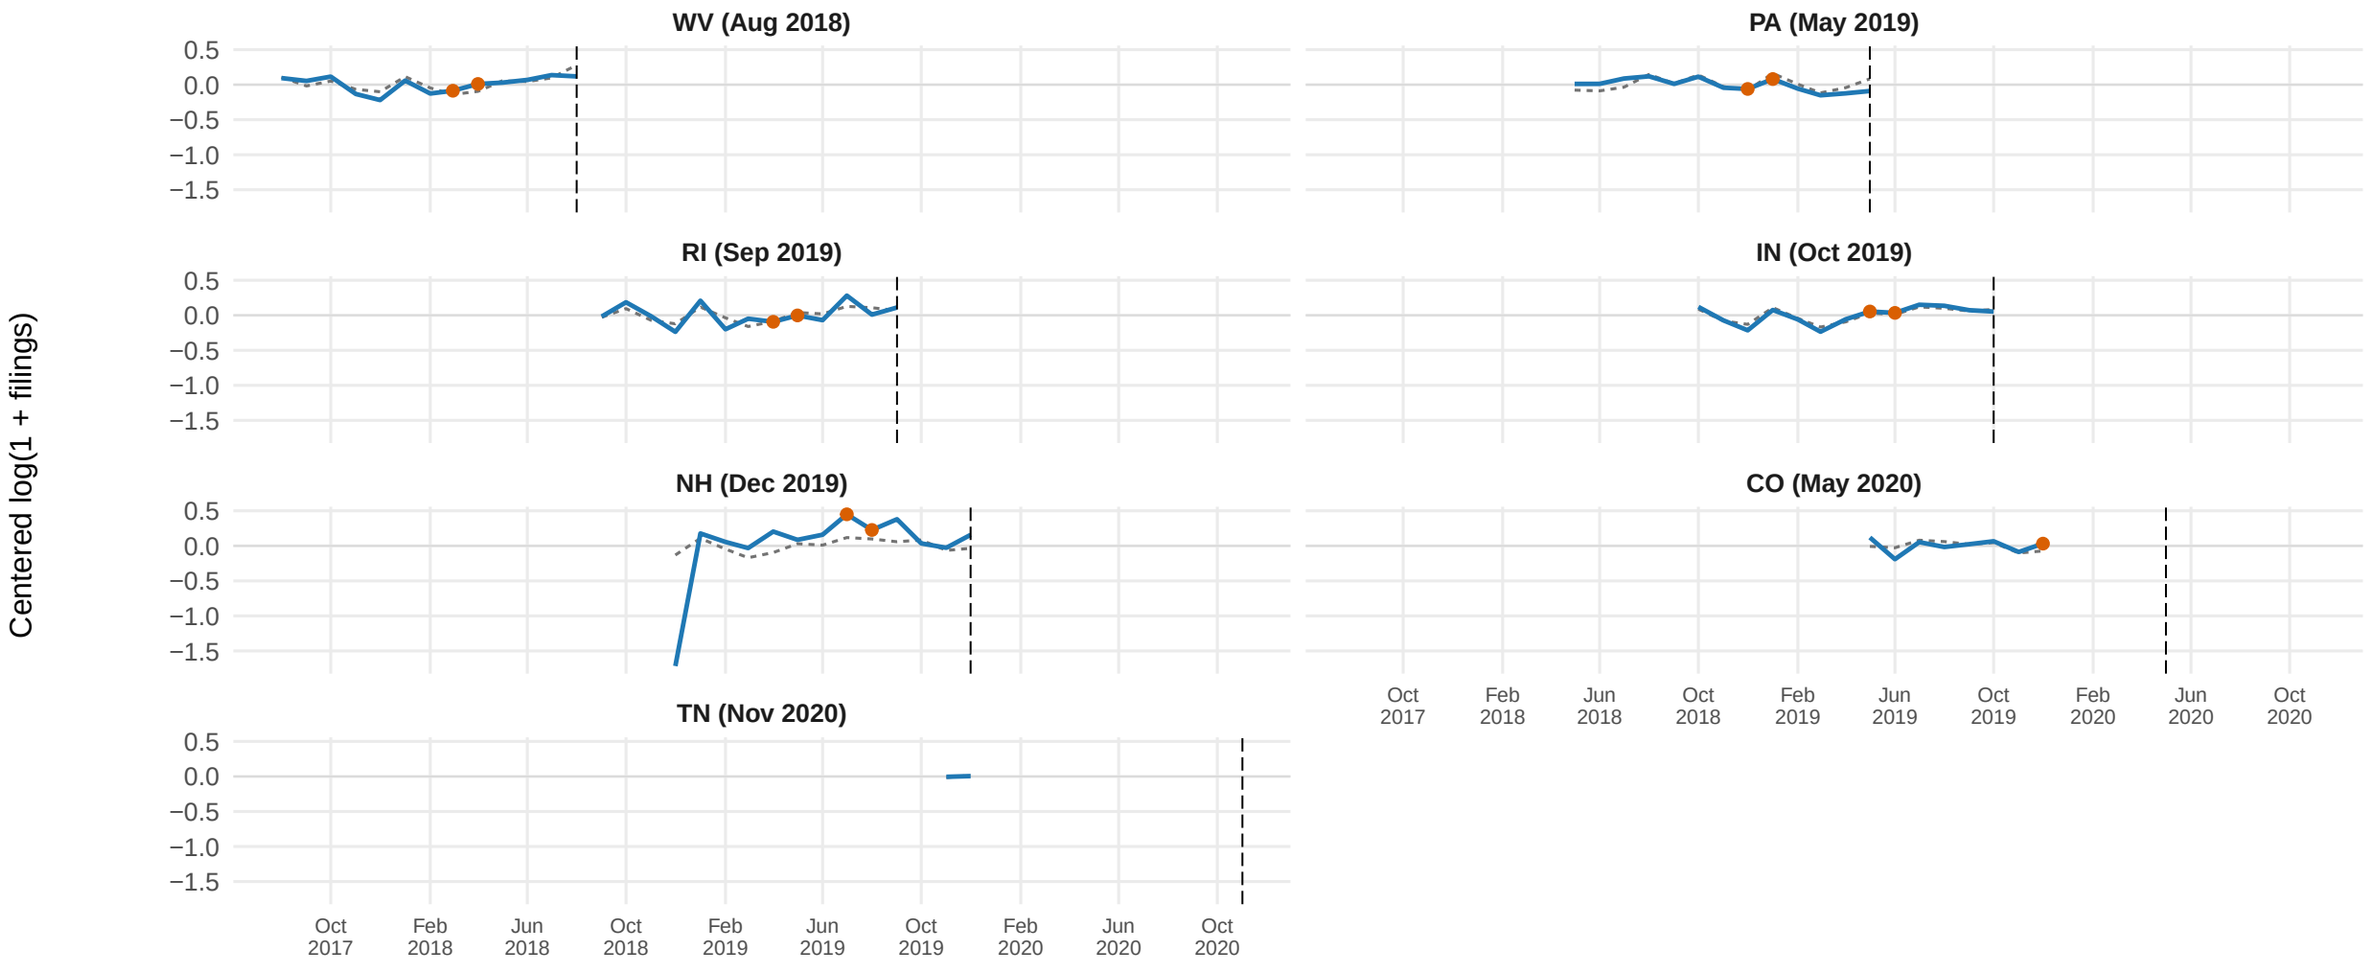
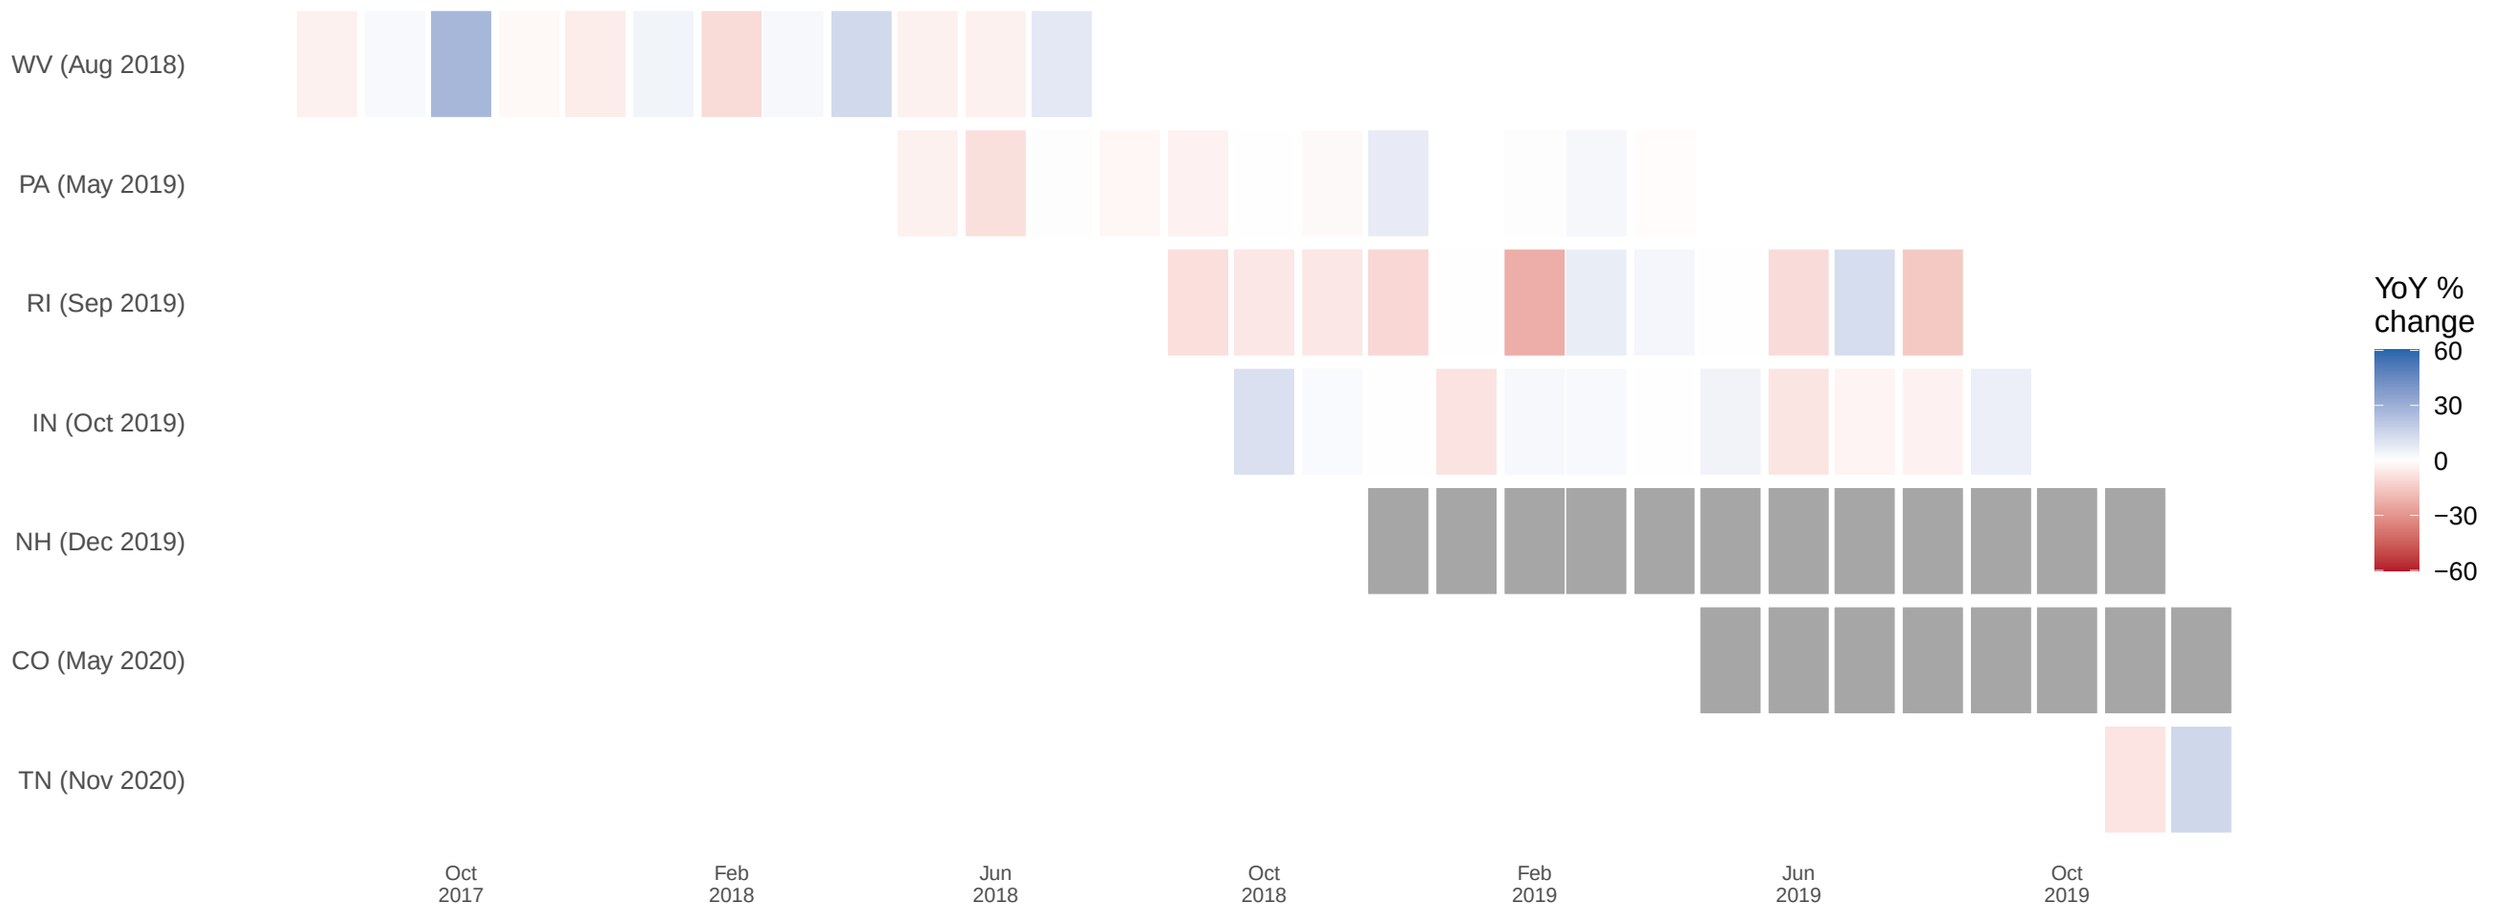
Pre−2020 Pre−Trends by Treated State

Blue: state log filings, centered on its own pre−window mean. Dashed gray: never−treated mean over the same calendar months.
Orange points mark event times −5 and −4, the near−leads that remain significant even after dropping NH.



Year−over−Year Change Within Each Treated State

Same pre−treatment months as the pre−2020 event−study window. Gray tiles mean no 12−month comparison exists in the underlying panel.



Sample matches the pre−2020 specification in evaluate_pretrends_modern_methods.R. Excluded states: ME. Treatment is online legalization. NH is retained here to show the outlier that drives the far−pre lead.
